Summary: this exercise shows how cout can be used, referring to main's argc and argv parameters.

Listing 1: main.cc

```
#include <iostream>

using namespace std;

int main(int argc, char *argv[])
{
    // just a simple cout illustration
    cout << "the program is called as " << argv[0] <<
        ", it's called with " << (argc - 1) << " arguments\n";
}
```
